Introduction

From a conventional tent to the comfort of an RV, from a cozy cabin to a primitive bivy, camping enables people of all ages and skill levels to connect to the outdoors. The inherent flexibility of the activity makes it accessible to virtually everyone. In fact, camping can be such a varied activity, that there is no universally held definition of what camping is. Instead, it encompasses the spirit of escaping everyday life to embrace the outdoors. The 2016 American Camper Report profiles the 40 million Americans who use camping to connect to the Great Outdoors in their own unique ways.

A Look Back at 2016: Overall Trends

Forty million Americans, or 14 percent of the population over age six, camped at least once in 2015. While the activity lost 500,000 participants, the participation rate remained steady. In fact, participation in camping has remained steady at 14 percent since 2012.

In total, participants camped 587.2 million days, or an average of 14.7 days per camper. This was an increase from 2014 when campers logged 572.4 million days, or an average of 14.1 days per camper.

As seen in previous reports, the majority of camping participants were Caucasian and skewed slightly male with an average age of 35. While participation was spread fairly evenly across the nation, the Mountain Region – which stretches from Montana down to Arizona and New Mexico – had a slightly higher participation rate than the other regions in the United States.

These campers went on an average of 3.8 camping trips per year that each lasted an average of 2.7 nights. They typically drove 146 miles to their destinations — which were often state campgrounds — and set up camp within one-fourth of a mile from their cars.

The Year Ahead: Future Opportunities

Each year, research in The American Camper Report underscores the importance of introducing Americans to the outdoors at an early age to instill a lifelong passion for camping and encourage healthy, active lifestyles. Similar to previous years, half of current adult campers participated in outdoor activities from ages six to 12, compared to just 23 percent of non-campers. The gap among campers who participated during adolescence was similar.

The outlook for camping appears bright. Eighty-eight percent of first-time campers said it was “very likely” or “likely” that they would continue camping next year. And, camping participants, new and old, plan to set off on an average of almost four trips.

To help stakeholders reach campers and non-campers alike, the 2016 American Camper Report details camping participation and provides data and analysis on camping trends throughout the United States. The report also takes a look at first-time camping participants to understand what motivates non-campers to take their first outing and how to retain them as camping enthusiasts. The research in this report will help the camping industry — and the entire outdoor industry — be better equipped to engage campers and initiate an increase in camping participation.
Key Findings

Overview of Camping Participation

- Forty million Americans went camping at least once in 2015.
- Camping lost 500,000 participants from 2014 to 2015. Due to fluctuation in population size, the participation rate remained steady at 14 percent.
- Participants logged a total of 587.2 million camping days or 14.7 days per average camper.
- Tents were the most popular type of shelter.
- The Mountain Region had the highest camping participation rate at 19 percent.
- Eighty-eight percent of campers participated in multiple outdoor activities.
- The average camper was age 35.

Profile of a Camping Trip

- Campers went on an average of 3.8 camping trips, down slightly from 4.1 the year before.
- Forty-two percent of participants chose to camp at state park campgrounds.
- Camping outings lasted an average of 2.7 nights.
- Campers traveled an average of 146 miles to their camping destinations.
- Thirty-three percent of campers planned their trips at least one month in advance, but 38 percent did not make campsite reservations in advance.
- More than three-quarters of campers drove to their camping destinations and parked within one-fourth of a mile of their campsites.
- More than half of camping participants had access to electrical hook-ups, and of those, 78 percent used the available electricity.

Buying Behavior

- Sixty percent of camping purchases replaced lost or broken items.
- A majority of participants who purchased camping gear made the decision to buy camping gear prior to their outings.
- Flashlights were the most popular camping purchases in 2015.
- Campers were most likely to buy camping gear in a store without doing online research.
- Forty-two percent of campers spent between $51 and $200 on camping gear.

First-Time Campers

- Twelve percent of campers were new to the activity in 2015.
- The highest percentage of first-time campers were ages six to 12 and 25 to 35.
- Campers spent an average $128.26 on their first trip.
- Coolers, sleeping bags and flashlights were popular purchases for first-time campers.
- Eighty-eight percent of first-time campers said it was “likely” or “very likely” that they would participate in camping next year.

Future of Camping

- More than three-quarters of campers took their first trip between birth and age 15.
- Fifty-eight percent of campers were exposed to outdoor activities as adolescents.
- Camping participants planned to take an average of 3.6 trips in the next twelve months.
CAMPING PARTICIPATION

Forty million Americans, or 14 percent of the population of the United States, went camping at least once in 2015. Overall, camping lost a marginal 500,000 participants from 2014 to 2015, and camping participation had a churn rate (those leaving and joining the activity) of 27 percent.

Participants camped for a collective 587.2 million days, or an annual average of 14.7 days per camper. This is up slightly from 572.4 million days, or 14.1 average days, during the previous year.

More than three-quarters of camping participants were Caucasian. Among genders, campers were more balanced — 55 percent were male and 45 percent female.

Understanding the demographics, motivations, behaviors and barriers of camping participants is critical for increasing participation rates and growing the activity. The following section provides a detailed look at camping participation in the United States over the past year.

40 Million
40 million Americans, or 14 percent of the population, went camping in 2015.

Tents
Sixty-nine percent of participants primarily camped in tents.

587.2 Million
Americans went camping a total of 587.2 million days in 2015.
Camping Participation Over Time
All Americans, Ages 6+

Forty million Americans, or 14 percent of the US population, camped at least once in 2015. The number of camping participants decreased by 500,000 since 2014, while the participation rate remained steady at 14 percent.
### Camping Participation by Age

<td>14.7</td>
</tr>
</tbody>
</table>

*Note: Some campers participated in several types of camping.*
The leaky bucket analysis shows that from 2014 to 2015 camping lost more participants than it attracted. While 10.5 million people started camping (or returned to the activity), it lost 11 million campers. This resulted in a net loss of 500,000 camping participants and a churn rate (those leaving and joining the activity) of 27 percent.
Annual Camping Days

In 2015, participants camped for a total of 587.2 million days.

14.7 days

The average participant camped for 14.7 days in 2015.

Participation in Camping Among Adults with Youth in Their Households

*Campers, Ages 18+

Adults with children in their households participated in camping at a rate eight percentage points higher than their peers without children. Campers with children, ages six to 12, participated at a slightly higher rate than those with young children or teenagers.

![Graph showing participation rate by ages of kids in household]

© The Coleman Company, Inc. and The Outdoor Foundation
Length of Trip by Primary Type of Camping Shelter

_Campers, Ages 18+_n

The average camping trip lasted 2.7 nights. Camping participants who stayed in RVs took the longest trips — an average of 3.7 nights. Tent campers were slightly below the average, with their trips typically lasting 2.5 nights.

*Yurt and cabin camping participants have been combined to determine length of stay due to the small number of these types of campers.*
Camping participants went on an average of 3.8 camping excursions last year, with each outing usually lasting 2.7 nights. The longest trips occurred during the summer months. As seen in previous years, state park campgrounds were the most popular camping venues. Camping participants drove about 146 miles, down ten miles since 2014, and parked within one-fourth of a mile from their chosen campsites.

While nearly 60 percent of camping trips were planned two weeks or more in advance, campsites were not usually reserved before the trip. Thirty-eight percent were walk-in reservations.

Many campers enjoyed the comforts of home while on their trips. Forty-six percent used an electrical hook-up and 69 percent used a Smartphone. Still, campers enjoyed the outdoors by hiking during the day and hanging out by a campfire at night.

The following section takes a comprehensive look at what happened before and during camping trips in the United States.
Camping in the last 12 months...

Number of Camping Trips per Year

Adult campers made an annual average of 3.8 camping trips in 2015. More than half camped one or two times, while a dedicated six percent went camping 11 or more times per year.

Camping Venue

“In which venue did you camp in the last 12 months?”

<table>
<thead>

</tr>
</tbody>
</table>

Forty-two percent of adult participants camped at state park campgrounds, making them by far the most popular venue.
Most recent camping trip...

Length of Trip

In 2015, camping trips lasted an average of 2.7 nights. A majority of trips, 90 percent, lasted between one and four nights. Only 10 percent extended beyond four nights.

Distance from Home

Participants traveled an average of 146 miles to their camping destinations in 2015. This was down slightly from almost 156 miles traveled the year before.
Most recent camping trip...

Trip Planning and Preparation
Campers, Ages 18+

Camping excursions were planned almost a month in advance — an average of 26.4 days.

Campsite Reservations
Campers, Ages 18+

Of campers who stayed at campsites, 38 percent did not make reservations ahead of time.
Most recent camping trip...

Type of Trip

More than three-quarters of adult campers drove to their camping destinations and parked within one-fourth of a mile of their campsites. Eighteen percent hiked into the backcountry to camp, and six percent camped in their backyards.

Number of Camping Trips by Season

Summer was the most popular season to go camping, with an average of two trips during the season. Campers took an average of 1.9 trips in the fall, 1.8 in the winter and 1.7 in the spring.
Most recent camping trip...

Electrical Hook-up Availability

While more than 50 percent of campers did not have access to electrical hook-ups at their campsites, 46 percent did.

Use of Electrical Hook-up

Of the campers who had access to electrical hook-ups, 78 percent used them.

Camping itself was the primary motivation for most people to go camping. Slightly more participants, ages 35 to 44, said spending time with family was the primary motivation for camping.
Across all age groups, hiking was the favorite activity to do while camping. Fishing rated as campers’ second most favored activity for all age groups, except those ages 45 to 54. That age cohort rated outdoor cooking as their second most favorite activity.

A majority of camping participants were either employed or were still students, who were not yet employed. Only three percent were unemployed and looking for a job.

Tents were considered to be the most essential camping equipment for many campers. The biggest luxury items were TVs or electronics, followed closely by electricity.

In 2015, camping-related purchases tended to be practical and predetermined. Sixty percent of purchases replaced lost or broken equipment. Purchases were typically not spontaneous. Decisions to buy equipment were made prior to the camping trip.

This section explores the buying behaviors of the nation’s camping participants. The research gives the camping industry insights into the consumers of camping goods.

Replacement
Sixty percent of camping purchases were replacement items.

Store
Campers were most likely to buy camping equipment in a store without doing online research.

Flashlight
Flashlights were the most purchased camping gear in 2015.
Camping Participants by Employment Status

A majority of camping participants — 66 percent — were either employed or were students who were not yet employed. Three percent of campers were temporarily unemployed.
Most Essential Camping Items

Campers by Age

Tents were considered the most essential camping item for all campers, regardless of age. Sleeping bags ranked second for all age groups, except for campers ages 55 and over. Those older campers considered bug spray second most essential.

Most Luxury Camping Items

Campers by Age

TVs or electronics were thought to be the most luxury camping item. A slightly higher percentage of campers, ages 35 to 44, thought electricity or power was the most luxurious item. Additionally, younger campers seem to value wireless internet or GPS more than older campers.

Camping Item Purchased by Age

Campers by Age

In general, flashlights were the most purchased camping item; however, the percentage of older campers, ages 55 and over, who purchased flashlights was fairly low. Those participants were less likely to make camping-related purchases than participants in the younger age groups.

While 13 percent of camping participants cut spending on outdoor recreational activities and sports or recreational clothing, nine percent increased spending on the same activities and items.
FIRST-TIME CAMPERS

Twelve percent of camping participants were new to the activity in 2015.

First-time campers tended to be between the ages of six and 12 or 25 to 34. After age 34, the likelihood of taking a first camping trip decreased.

Spouses or significant others were the preferred camping companions for first-time campers.

In preparation for a first camp, participants spent about $128 on gear, down approximately $75 since last year. Sixty-three percent of first-timers bought coolers. Sleeping bags and flashlights were also popular purchases.

With “fun” used by 54 percent of participants to describe their first outings and with 88 percent of campers saying it is “likely” or “very likely” that they will participate in camping next year, it can be assumed that the majority of first trips were successful.

This section examines participants who camped for the first time in 2015 to better understand what motivated them to take a first outing and how to retain them as lifelong camping participants.

Spouse

Forty-five percent of first-time campers were motivated to camp by a spouse.

$128

Campers spent an average of $128.26 on their first camping trips.

Fun

More than half of first-time campers associated their first trips with the word “fun.”
First-Time Campers

In 2015, twelve percent of all campers were new to the activity. The majority of participants, 88 percent, had been camping in previous years.

Age of First-Time vs Experienced Campers

Campers who were new to camping in 2015 tended to be younger than campers who had previously participated. The highest percentage of first-time campers were ages six to 12 and 25 to 35.

- Very Unlikely: 3%

© The Coleman Company, Inc. and The Outdoor Foundation
More than three-quarters of current adult campers were introduced to camping between infancy and age 15. The percentage of Americans being introduced to camping fell after age 15 and generally declined as age increased.

The impact of exposing young people to outdoor recreation was also seen in the percentage of current adult campers who participated in recreational activities at a young age. Half of adult campers participated in outdoor activities from ages six to 12, compared to just 23 percent of non-campers. The gap among campers who participated during adolescence was similar.

The future of camping looks bright, with camping participants estimating that they would set off on an average of 3.6 trips next year.
Introducing Camping for the First Time
Campers, Ages 18+

Among current adult campers, 76 percent took their first camping trip between infancy and age 15. The percentage of people being introduced to camping after age 15 sharply dropped, and the likelihood of being introduced to camping generally decreased as age increased.
Youth Participation in Sports and Recreation Among Current Adult Campers

Americans, Ages 6+

Half of adult campers participated in outdoor activities from ages six to 12, compared to 23 percent of non-campers. During adolescence, 58 percent of adult campers participated in outdoor activities, while only 35 percent did not.

Reasons for Taking Fewer Trips

_Campers who Took Fewer Trips, by Age_

Campers blamed lack of time due to work or school commitments as the reason for taking fewer trips. Participants, ages 55 and over, said they had family commitments or didn’t have enough vacation time.

Most Time-Consuming Aspect of Camping

_Campers by Age_

All campers, except those ages 18 to 34, tended to say packing and unpacking were the most time-consuming parts of camping. Young adult campers, however, said it was just finding the time to get away.

Method

During the 2015 calendar year, a total of 32,658 online interviews were carried out with a nationwide sample of individuals and households from the US Online Panel of over one million people operated by Synovate/IPSOS. A total of 15,167 individual and 17,491 household surveys were completed. The total panel is maintained to be representative of the US population for people ages six and older. Over sampling of ethnic groups took place to boost response from typically under responding groups.

The 2015 participation survey sample size of 32,658 completed interviews provides a high degree of statistical accuracy. All surveys are subject to some level of standard error — that is, the degree to which the results might differ from those obtained by a complete census of every person in the US. A sport with a participation rate of five percent has a confidence interval of plus or minus 0.24 percentage points at the 95 percent confidence level.

A weighting technique was used to balance the data to reflect the total US population ages six and above. The following variables were used: gender, age, income, household size, region, population density and panel join date. The total population figure used was 294,141,894 people ages six and older.

In many charts, sums less than two percent have been omitted.

Supplemental Survey
Profile and projection data representing ages six and over are from the national represented survey. An additional survey was completed recontacting 1,092 respondents, ages 18 and over, who camped in 2014 to collect data on more specific camping experiences. The collection method in both surveys was the same.

Youth Interviews
All interviews of children under 13 were carried out following the guidelines set out in the Children’s Online Privacy Protection Act of 1998 (COPPA). No children were contacted directly. The panel is a balanced sample of households with children in each age group, but contact is always made through designated adult panelists. The adult panelist receives the survey invitation on behalf of a specified child, age 6 to 12, and they are asked to complete the survey together. Respondents ages 13 to 17 are contacted in a manner similar to respondents ages 6 to 12, but they are asked to complete the survey themselves.
